26 July, 2021

This UMAP plot is based on the Gaussian Discrimination Parameters and a subset of channels (such as Bead and DNA channels) that we expect to be consistent for all live, intact, single cells. It is intended to cluster into technical populations, such as “doublets,” “beads,” and “debris.” While there may be some biologically meaningful variation evident in the plot, that is not its main purpose.

## Proportions

##	Whole	Cells	Debris	Doublets	Beads	GDP Failures	TOTAL
## 1	19723	235875	28452	5424	10526	300000
